Education

San Diego State University
B.S. in Computer Science — AI/ML Concentration

San Diego, CA
Graduation date: Fall 2027

Relevant Coursework: Intro/Intermediate to Programming/Python/Java/C++, Data Structures, Algorithms, Computer Architecture, Operating Systems, Intro to Artificial Intelligence, Machine Learning, Neural Networks, Stats, Probability, Calculus series, Linear Algebra.

Skills/Projects

Skills: Python, Java, C++, TensorFlow, Computer Vision, Deep Learning, CNNs
Projects:

Blockchain Project:

Built a **miniature blockchain** to understand and implement **hashing, mining, Proof of Work (PoW), block validation, data integrity, and blockchain architecture**, including how new blocks are created, validated, and cryptographically linked to previous blocks while preserving transaction history.

Amazon Drone Delivery Optimization:

Built a **package delivery optimization system** inspired by **Amazon logistics**, improving **routing efficiency** by prioritizing deliveries based on **physical proximity** rather than numerical order, reducing **unnecessary travel distance** between apartment units and delivery locations.

Deep Learning Digit Recognition System:

Built a **computer vision** model using **Convolutional Neural Networks (CNNs)** and **image preprocessing** techniques to classify handwritten digits. Used **TensorFlow** and the **MNIST dataset** to **train, evaluate, and optimize** the model for improved **classification accuracy**.

Experience/Leadership

AI Club Member — SDSU AI Club, San Diego State University

Active member of the SDSU AI Club, participating in workshops, technical discussions, and collaborative projects focused on machine learning and artificial intelligence. Engage with peers to explore modern AI tools, research trends, and practical applications in software engineering and data science.
